

AGB UAN Trace Chelate

Description

UAN Trace Chelate is a high nitrogen based product with trace elements to pick up the crop and maximize the nitrogen utilization.

A brief explanation of the function of the different elements is detailed below:

- Copper is important for reproductive growth, as an aid in root metabolism and helps in the utilization of proteins.
- Zinc is essential for the transformation of carbohydrates and regulates consumption of sugars.
- Manganese functions with enzyme systems involved in breakdown of carbohydrates, and nitrogen metabolism.
- Molybdenum helps in the utilization of Nitrogen.
- Cobalt aids in the formation of Vitamin B12.
- Magnesium is part of the chlorophyll in all green plants and essential for photosynthesis. It also helps activate many plant enzymes needed for growth.
- Boron helps in the use of nutrients and regulates other nutrients, aids production of sugar and carbohydrates and is essential for seed and fruit development.

General Application Rates

- **Slight Deficiency:** As per recommendation.
- **Moderate Deficiency:** As per recommendation.
- **Severe Deficiency:** As per recommendation.

The application rates above are guidelines. Agrace always recommends consultation with your local agronomist to base the application rates on soil and plant tissue testing, paddock history, environmental factors, soil conditions, and crop type. For more information on these topics please see Agrace's brochure marked "Foliar Nutrients".

Constituents

Minimum Guaranteed Analysis

Nitrogen (N)	39.0	% w/v
Sulphur (S)	0.70	% w/v
Magnesium (Mg)	0.075	% w/v
Copper (Cu)	0.025	% w/v
Zinc (Zn)	0.025	% w/v
Manganese (Mn)	0.075	% w/v
Cobalt (Co)	0.012	% w/v
Molybdenum (Mo)	0.012	% w/v
Boron (B)	0.052	% w/v
Iron (Fe)	0.030	% w/v

with lignosulphonate binder; surfactants; penetrants.

The Agrace Benefit

Agrace is at the forefront of research and development of chelated (protected) liquid nutrient fertilizers. The efficacy of foliar absorption of fertilizer elements is targeted to be optimized by binding agents assisting in rain fastness, penetrants to open increased number and area of pore sites, and surfactants to reduce surface tension of liquid droplets on plant surfaces. The formulations development is to prevent the greatest financial losses in fertilization, that is, the fixation of soil nutrients by adverse soil reactions. Agrace is committed in delivering quality products with high nutrient absorption and utilization for increased crop productivity and profit.
