

# AGB Prescription Mix

## For Reduced Cost and Ease of Application

### Description

**P**rescription mix formulations by Agrace are based on soil and plant tissue analyses performed by ASPAC accredited laboratories. The obtained analytical result will indicate the nutrients that are in deficiency or excess in soil and plant. Based on these results the fertilizer requirement is formulated specifically for your soil and the plants needs. The prescription mix may then be applied by boomspray, mister, or aerial spray.

All the nutrient elements in your prescription mix are protected by a complex process called chelation. This prevents the interaction of other elements and soil conditions which may render nutrients unavailable, hence maximum nutrient availability and utilization is achieved.

The formulated protecting agent provides maximum absorption and translocation into and within the plant releasing the nutrients at the required sites. It also incorporates binding and penetrating agents, which minimise the effect of leaching and provide optimal absorption levels, without scorching.

### Constituents

As per soil test or plant tissue analysis.

### The Agrace Benefit

Agrace is at the forefront of research and development of chelated (protected) liquid nutrient fertilizers. The efficacy of foliar absorption of fertilizer elements is targeted to be optimized by binding agents assisting in rain fastness, penetrants to open increased number and area of pore sites, and surfactants to reduce surface tension of liquid droplets on plant surfaces. The formulations development is to prevent the greatest financial losses in fertilization, that is, the fixation of soil nutrients by adverse soil reactions. Agrace is committed in delivering quality products with high nutrient absorption and utilization for increased crop productivity and profit.

### Product Codes

20L  
AGB0084

200 Litre  
AGB0083

1000L Litre  
AGB0082

### General Application Rates

- **As per prescription mix label and instructions.**

The application rates above are guidelines. Agrace always recommends consultation with your local agronomist to base the application rates on soil and plant tissue testing, paddock history, environmental factors, soil conditions, and crop type. For more information on these topics please see Agrace's brochure marked "Foliar Nutrients".
