

AGB Nutrimin Crop Spray

Description

Nutrimin Crop Spray is a complex mix of trace elements aimed for broadacre application of crops where sandy and acidic soils play a degradative role in soil application.

- Copper is important for reproductive growth, as an aid in root metabolism and helps in the utilization of proteins. Copper deficiency depresses reproductive growth (formation of seeds and fruits), as well as depresses nitrogen fixation in legumes and delays flowering and senescence.
- Zinc is essential for the transformation of carbohydrates and regulates consumption of sugars and is also involved in the production of growth promoting substances (auxins). Zinc deficiency also effects the integrity of cell membranes.
- Manganese functions with enzyme systems involved in the breakdown of carbohydrates, and nitrogen metabolism and by the reduced chlorophyll and gibberellic acids in the plant, inhibits the growth.
- Molybdenum helps in the utilization of Nitrogen.

For more information on AGB Nutrimin Crop Spray, please contact Agrace.

General Application Rates

- **Slight Deficiency (Maintenance):** 2.5 L/Ha
- **Moderate Deficiency:** 5.0 L/Ha
- **Severe Deficiency:** 7.5 L/Ha

The application rates above are guidelines. Agrace always recommends consultation with your local agronomist to base the application rates on soil and plant tissue testing, paddock history, environmental factors, soil conditions, and crop type. For more information on these topics please see Agrace's brochure marked "Foliar Nutrients".

Manufactured by: Agrace Pty Ltd
35 Wattlepark Avenue, Moolap, Victoria 3221

Telephone: 1800 154 433
Facsimile: 1800 154 332
Email: service@agrace.com.au
Web: www.agrace.com.au

Constituents

Minimum Guaranteed Analysis

Nitrogen (N)	3.50	% w/v
Potassium (K)	2.00	% w/v
Sulphur (S)	3.50	% w/v
Copper (Cu)	1.00	% w/v
Zinc (Zn)	3.00	% w/v
Manganese (Mn)	2.00	% w/v
Molybdenum (Mo)	0.02	% w/v

with lignosulphonate binder; surfactants; penetrants.

The Agrace Benefit

Agrace is at the forefront of research and development of chelated (protected) liquid nutrient fertilizers. The efficacy of foliar absorption of fertilizer elements is targeted to be optimized by binding agents assisting in rain fastness, penetrants to open increased number and area of pore sites, and surfactants to reduce surface tension of liquid droplets on plant surfaces. The formulations development is to prevent the greatest financial losses in fertilization, that is, the fixation of soil nutrients by adverse soil reactions. Agrace is committed in delivering quality products with high nutrient absorption and utilization for increased crop productivity and profit.
